Q. Write an algorithm in the form of a pseudocode which takes temperatures input over a 100 day period (once per day) and outputs the number of days when the temperature was below 20C and the number of days when the temperature was 20C and above.

(Note: Write the loop condition for all loops including for next, While do endwhile And Repeat until)

Hint:

For i= ? to ?   while ( ) do   Repeat

<   Write   the   body   of   loops   here   altogether>

For next   end while   until ()
